

SIMPLICITY AUSTRALIA RELEASE THE NEW SEEDMASTER

Simplicity Australia is excited about the introduction of the SeedMaster product range into their family. Adding this quality broadcast, ground-following planter into their existing range adds a serious weapon to their arsenal.

The Simplicity name is synonymous with quality airseeders and, over the last 15 years, extended into universal tillage lines, being the Allrounder and precision toolbar planting equipment, including the Striker and X-Bar.

There is a lot of confidence at Simplicity that the new SeedMaster precision planter will be one of the most efficient, effective, direct seeding technologies available on the market.

Other innovations, like the Residue Deflector, Active Wing Brace and Lift Kit (weight transfer system) further enhance the efficiency of our direct seeding system.

The Simplicity SeedMaster comes in sizes up to a massive 90 feet or 27 metres and uses a dual knife system to ensure precise fertilizer and seed placement, maximising agronomic performance.

Simplicity proudly offers their customers an extensive package of world-class products to select from, with the confidence in knowing these products have been designed and are supported by a manufacturer focused on planting best practice.

Before you ever purchase a SeedMaster, you can rest assured that they endure rigorous testing and seasons of use before being released for production. After your purchase, you can count on the highest level of service and support from our dealer network.

Simplicity Australia has a comprehensive professional dealer network that covers Australia and New Zealand's broadcast farming regions.

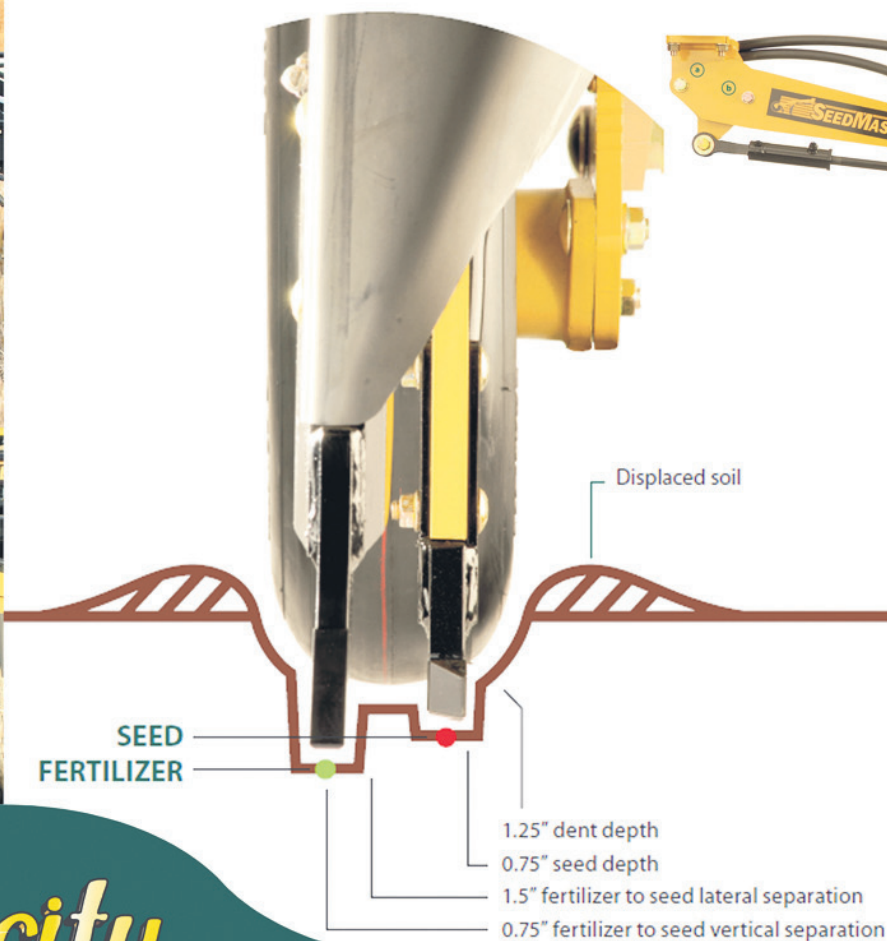

Simplicity supports them so they can support you.
